WHO WE ARE?

Panhandle Metals is a leading dealer of steel structures. We deliver, and install high-quality metal buildings for our customers. We have been in the business for years now and have the experience and expertise to get the job done right. When it comes to metal buildings, Panhandle Metals is the name you can count on. We're your building dealer and your expert advisor.

WHAT WE DO?

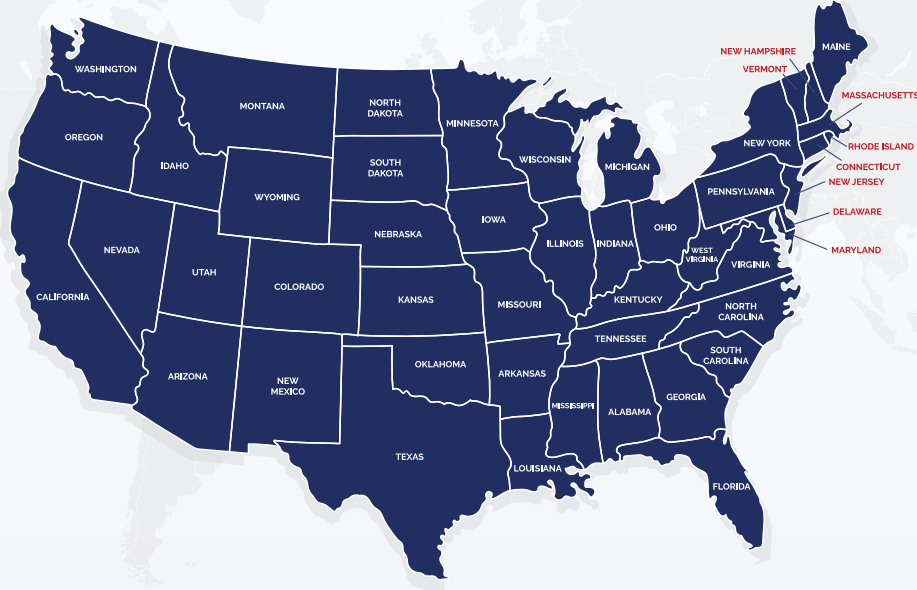

We provide best-quality metal structures including garages, carports, barns, recreational vehicle covers, workshops, loafing sheds, and more. Our focus is on fulfilling the needs and expectations of our customers. Whatever your requirements are, we can deliver you the structure of your dreams. We provide metal buildings to customers nationwide, serving homeowners, businesses, farms, and commercial projects across the United States.

LOCATIONS WE SERVE

Our team is ready to serve customers nationwide with high-quality steel buildings. Having helped deliver over 5,000 metal structures, our experienced professionals are committed to making your building purchase simple, seamless, and hassle-free.

DELIVERY AND INSTALLATION TIME

Delivery time may vary depending on the location and size of the building. But we strive to deliver and install your building in a timely manner, with a waiting period of **2 to 6 weeks**. Although, we try our best to deliver your building in no more than **60 days**.

Installation time for small carports or sheds is **2 to 3 hours**, for a standard garage it is **6 hours**, and for a standard barn **8 hours**. For large buildings, installation may take a few days.

03

BUILDINGS WE OFFER

We provide a wide range of metal buildings tailored to your requirements and criteria.

METAL BUILDINGS

Metal buildings are becoming increasingly popular, regardless of location. These buildings can be used as a garage, barn, carport, or even as a home. In addition, all of our steel buildings are certified against bad weather conditions.

CARPORTS

Metal carports are highly versatile and durable structures that can protect a wide range of vehicles, including bikes, cars, ATVs, boats, and trucks. The steel framing of these buildings is made up of galvanized steel, which is incredibly strong and provides excellent protection against harsh weather conditions like snow, wind, and rain.

GARAGES

An enclosed garage structure will protect your possessions from the elements and also give you some extra space to store equipment, tools, and other valuables. If you are the owner of expensive cars, RVs, or other vehicles, these custom garages will easily meet your needs and specifications.

UTILITY & COMBO STRUCTURES

Utility buildings are multifunctional, meaning they can be used for a variety of purposes. Want to park your car in a shelter and also want to use the space as a guest room? No problem! These buildings are custom-built, so you can have them designed according to your needs and specifications.

04

RV COVERS

At Panhandle Metals, we sell 100% American-made, high-quality, and affordable RV covers. Our wide range of RV carports and RV garages provide the strongest protection from outside elements for your RV, camper, boat, motorhome, fifth-wheel, and more. You can even choose to customize your metal RV carport kits to suit your every need and application.

LOAFING SHEDS

It is essential to care for your animals and make sure they are comfortable all year round. At Panhandle Metals, we understand this need and offer a wide range of loafing sheds. These sheds are built with high-quality galvanized steel that can withstand extreme weather conditions like heavy winds, rains, snow, and even harmful UV rays. They are the perfect shelter for your livestock, hay, and other farming utilities.

METAL SHEDS

Looking for an investment that will give you extra storage space for your belongings and vehicles? Look no further than a metal shed from Panhandle Metals. We can customize your shed to be open-sided, semi-enclosed, or fully enclosed, depending on your needs. You can also choose from a variety of designs, roof styles, colors, and other features and get that perfect shed of your dreams.

BARNES

If you're looking for a sustainable and durable option for your farming business, a metal barn is a great choice. They are strong and versatile, and can easily protect your farm animals, equipment, hay, vehicles, and other valuables from the harsh elements. We, at Panhandle Metals, offer high-quality barn buildings that are designed to withstand all kinds of weather, including high winds, snow, and rain.

CUSTOMIZATIONS WE PROVIDE

CUSTOMIZE YOUR METAL STRUCTURE ACCORDING TO YOUR NEEDS

BUILDING DIMENSIONS

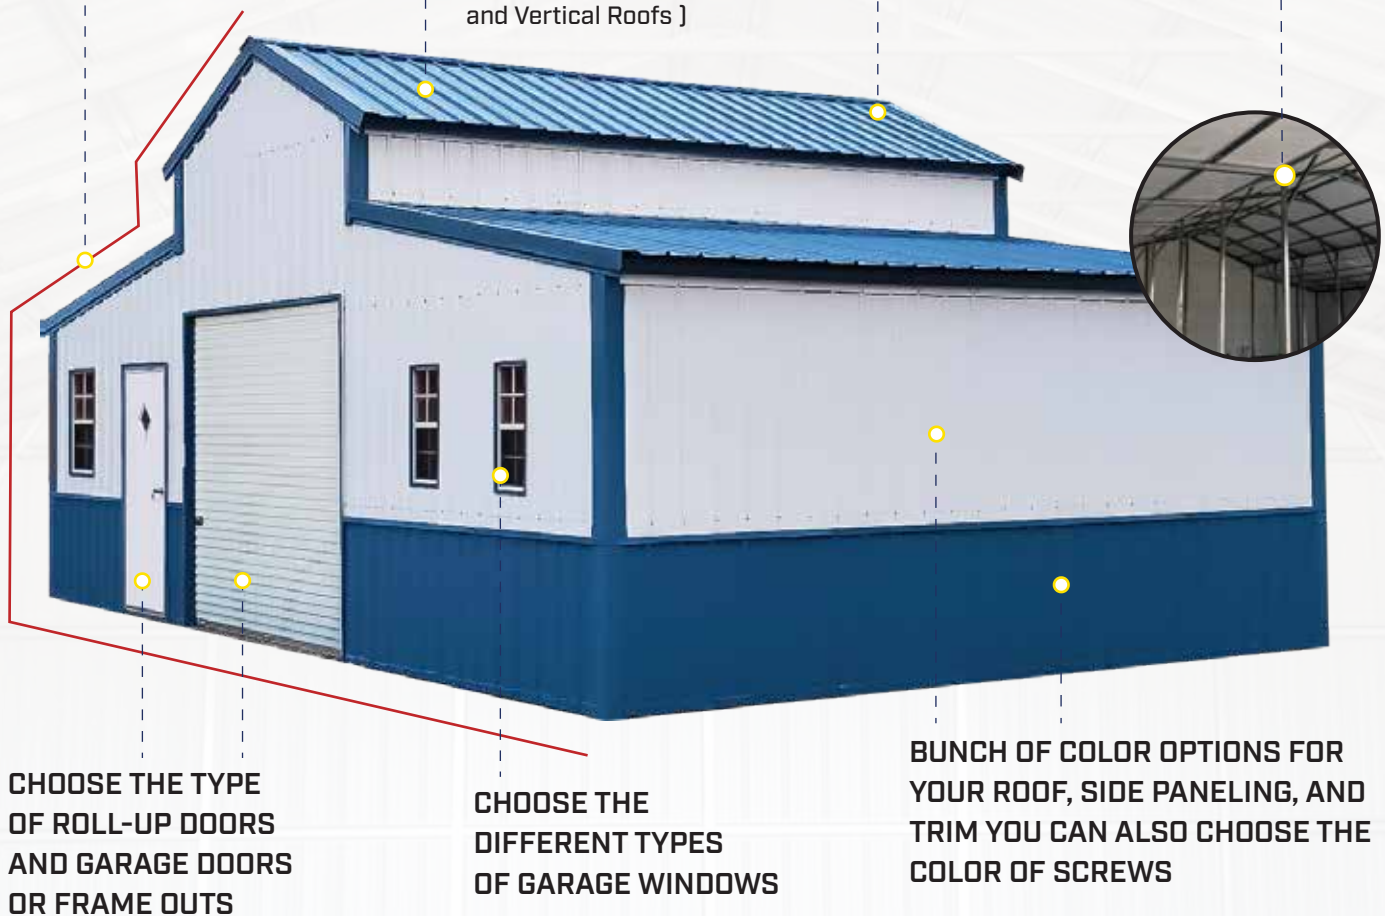

[Choose Your Own Custom Width, Length, and Height]

LEVELED LAND AWARENESS

Panhandle Metals is very thankful for your purchase; however, it is critical that the surface is leveled by a professional prior to installation. Neither Panhandle Metals nor the subcontractors that we utilize will be able to set up the structure if any of these issues are found at the job site.

INSULATION

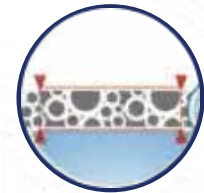

Panhandle Metals installs Prodex insulation on customers request. With Prodex Total Insulation, you can create a more comfortable environment for a variety of purposes that will last as long as your building stands. This type of insulation is the highest quality metal building insulation available, with a single-layer rating of R16 and a double-layer rating of R21. Our customers use Prodex Total Insulation to turn their buildings into the spaces they've always dreamed of. This insulation will stay in place no matter how long your building stands.

THERMIC INSULATION

WATERPROOF ISOLATION

806-553-3026

info@panhandlemetals.com

→ THERMAL BARRIER

* Inside layer made of heat-sealed insulating bubbles. Eliminates convection and conduction heat transfers (can represent 25% of all energy loss/gain in your building).

→ RADIANT BARRIER

* The highly reflective surface of metalized foil (made of 99% pure aluminum) and white polyethylene eliminates radiant heat transfers (can represent 75% of all energy loss/gain in your building).

→ VAPOR BARRIER

Combined product material acts as vapor barrier. Protects against condensation and mildew.

The highly reflective surface provides optimal thermal performance:

- 97% radiant heat reflection.
- Acts as a vapor barrier.
- Maximize Thermal resistance (R value) without adding significant thickness to the insulation system.
- Helps maintain temperature and humidity distribution of the structure at time of construction.
- Can be used on its own, or in conjunction with massinsulation.

Sources of Heat Loss in an Uninsulated Wall Cavity

In reality, a large portion of heat is gained/lost by radiant means. Radiant Insulation reflects heat that is trying to enter your cool living space back out so that it never gets to you. This provides for much cooler buildings in the summer. By the same means, if you use a reflective product facing into the building, you will reflect the heat you produce in the winter back into the building.

Reflective Insulation = Warmer Winters & Cooler Summers

Better Alternative

Reflective Insulation is a uniquely designed system made from layers of insulating air bubbles encased by a reflective surface. This unique combination delivers a high performance insulating product suitable for all construction and home renovation projects.

Summer

Reflects heat away from your living spaces, blocks significant heat gain in your house, and cuts air conditioning costs.

Winter

Reflects escaping heat back towards your living spaces, reducing heat loss, and lowering heat bills.

NOTE: If you are needing special drawings or wet stamped drawings for your building, there will be an additional charge.

Note: Vertical Buildings Are 1' Shorter Than Horizontal.

VERTICAL ROOF STYLE

STANDARD FEATURES

5 Bows, Corner Braces, and Center Braces. (Welded center braces standard on 22' wide and wider). Braces on legs & either concrete or rebar & mobile home anchors included.

- FICO - 600 and Above
- States Coverage 90% US Population

YOUR BUILDING WILL BE SHIPPED IN A TRUCK WITH A TRAILER

We ensure maximum safety while delivering and installing your **metal building**.

This is a normal Truck and Trailer that crew will be using to bring your building to the site. Do you have room for them to reach job site, unload and turn around? Is there a steep hill or sharp curve they will have to attempt to climb that could hinder their progress?

CONCRETE SLAB RECOMMENDATIONS

The professionals will install the anchors, Customers/General Contractors, are not responsible for installing anchors. When considering Concrete Slab options, it should be noted that they are only applicable for buildings with a width of up to 30 feet and must feature a 4-inch thick slab with a 12-inch x 12-inch perimeter footing. Check your local building code while considering the slab.

OPTION 1 - SLAB SIZE BIGGER THAN THE BUILDING

We suggest that the customer increase the slab size by 3" all around to reduce the risk of cracking. They should be advised that any water will run under the base rail, and this is not considered a repair. We can offer a temporary solution of applying silicon sealant; however, we do not guarantee it will be 100% waterproof. Also, the customer will be charged for the installation of silicon sealant, and the warranty will not cover this as it is not part of our product range.

OPTION 2 - SLAB SIZE SAME AS THE BUILDING

This option includes having the concrete slab match the size of the unit. To stop water from seeping below the base rail, the panel can be extended to cover some of the edges of the concrete. For the unit to be securely fastened, it is strongly suggested to include welded angles with an additional cost*. Furthermore, two L-Brackets should be affixed to both the sidewalls and end walls of each post.

CONCRETE PERIMETER FOOTING

- Customers can pour concrete footings for their unit, which is more cost-effective as it does not include a full concrete slab.
- For units up to 22' wide, the minimum footing size should be 12" wide by 12" deep, or as required by local code.
- For units 23' - 30' wide, the minimum footing should be 15" wide by 12" deep, or as required by local code.
- This is applicable for a wind rating of 110 MPH; for any other requirements, contact engineering for more information.

CONCRETE PIERS FOUNDATION

- Concrete piers are another option and should be placed on the corners of the unit and alternating posts.
- For units up to 22' wide, concrete piers should have a minimum width of 18" and a depth of 36".
- For units between 23' and 30' wide, concrete piers should have a minimum width of 24" and a depth of 36" for a wind rating of 110 MPH.
- For any other requirements, contact engineering for more information.

WHY PANHANDLE METALS

OUR FOUNDERS' VISION

Our founders have a strong vision for the services we provide and strive to maintain the highest standards for every customer. We are proud to be an American-owned and operated business, which allows us to create bespoke metal solutions with only the best materials and craftsmanship. All our metal structures come with a 20-year rust-through warranty and workmanship warranties, so you can be sure you are partnering and investing in a quality building from a reliable provider.

Our objective is to serve our customers efficiently by fulfilling their needs and expectations. With years of experience and thorough knowledge of the industry, we are delivering the best building solutions and services. Our products are delivered and installed nationwide across the United States.

PARTNER WITH PANHANDLE METALS

At Panhandle Metals, we work with trusted manufacturers to provide high-quality metal building solutions for residential, commercial, agricultural, and industrial needs. Our experienced team helps customers select the right building, customize their options, and coordinate reliable delivery and professional installation. With industry expertise and a commitment to customer satisfaction, we make the process of purchasing a metal building simple, efficient, and stress-free.

WHY CHOOSE PANHANDLE METALS

- ▶ Experienced metal building professionals
- ▶ Access to quality steel building solutions
- ▶ Expert guidance throughout the buying process
- ▶ Reliable delivery and installation services
- ▶ Solutions for residential, commercial, and agricultural applications
- ▶ Trusted manufacturing partners for dependable structures
- ▶ Customer-focused service from consultation to completion
